

<https://dev.dm2ldkjyed6nu.amplifyapp.com>

The link above is a website I made with AWS. The code included in this repository is the html, JavaScript, and python source code.

The website was made to help me practice my F2L cases. F2L (first 2 layers) is one of four steps in solving a Rubik's cube, and in total there are over 150 F2L cases. The website will provide you with a scramble algorithm to set up a specific case so that you can practice recognition and remembering the algorithm to solve it. If you forgot the case/algorithm, you can click the "show solution" button.
